

Appl. No. 10/659,602
Amdt. Dated Jun. 28, 2004
Reply to Office Action of March 26, 2004

Amendments to the Specification:

Please replace paragraph [0018] with the following amended paragraph:

[0018] Each of the recesses 17 extends from ~~communicate with the a~~
corresponding passageway passageways 19 outwardly toward and terminating at
extend through the outer face faces 132 of the side wall 13 so as to be exposed to
an exterior in a transverse direction, heat generated in the electrical connector 100
is quickly dissipated through the recesses 17 to ~~prevent~~ prevented the temperature
of the insulative housing 1 of the electrical connector 100 from increasing and to
decrease the probability of the deformation of the insulative housing 1 because of
high temperature.,-thereby This therefore ensures ~~ensuring the electric-character~~
function of the electrical connector 100 and reliable electrical connection between
the electrical connector 100 and the electrical card 5. It is noted that the recess 17
remains keeps substantially empty/unblocked in use (as shown in FIG.1) without
therein the redundant parts, e.g. the contact/shielding piece of either the connector
100 40 or the mating counterpart ~~during using~~ for implementation of the better heat
dissipation.
